

Quarterly Performance Report

As of March 31, 2017

It is the policy of the Department of Financial Services (DFS) to make available a broad range of investment options that have varying degrees of risk and return. The DFS has responsibility for ensuring that a variety of reasonable investment options are available, that information regarding these options is available to participants, and that program investment management expenses are kept to a minimum. The State of Florida's 457(b) Government Deferred Compensation Plan is a participant directed investment program. The DFS has an established Investment Policy for Product Selection and Retention (IPPSR) that establishes the investment standards for the Government Employees' Deferred Compensation Plan, adopts criteria for the selection and retention of the Plan's investment options, and provides a method for the quarterly evaluation and monitoring of the investment options. Copies of the IPPSR and product evaluations are available upon request.

For more information, you may contact our office at 850-413-3162 or toll-free at 1-877-299-8002. You may also visit our website at www.myfloridadeferredcomp.com.

The numbers discussed in this document are performance as of the date indicated. Past performance does not guarantee future results. To find more detailed information on products listed in this report contact the Investment Company directly. A prospectus can be obtained from the Investment Company and should be read carefully before investing.

Important Information about the Plan

Company Communications. The Investment Providers in the program offer a variety of methods to assist in retirement planning goals. The Providers that offer face-to-face representatives, phone, and Internet services are Empower Retirement, Nationwide Retirement Solutions, VALIC, and Voya. T. Rowe Price representatives are available via telephone and Internet. To enroll the following options are available:

- Click the  button on the Bureau of Deferred Compensation website (www.myfloridadeferredcomp.com) and complete and submit the EZ Enrollment Form electronically;
- Fax your EZ Enrollment form to 850-488-7186, or scan/email to deferredcompensation@fldfs.com (documents scanned or e-mailed should be encrypted to protect personal information);
- Enroll online with Nationwide, Empower Retirement, VALIC, Voya, or T. Rowe Price.
- Contact one or more of the 5 Investment Providers by phone to request an enrollment package to complete and return.

Investment Options Available. The Investment Providers offer a wide variety of mutual funds, target date funds(TDF), and guarantee of principal and interest accounts (see pages 11 and after for definitions).

Qualified Default Investment Alternatives (QDIA). Each Investment Provider offers a menu of Target Date Funds (TDF) used to default investment based on the participant's age and time to retirement. These TDFs qualify under the U.S. Department of Labor regulations as QDIA by acting as a single investment capable of meeting a participant's long-term retirement savings needs.

Fees Policy. The "Investment Management Fee" or Expense Ratio is a fee charged by the mutual fund company itself and not the Investment Provider and is included in the investment return. The investment management fee is important and should be considered when choosing an Investment Provider and investments. The Investment Management Fee is the only fee for investing in the Deferred Compensation Plan. For additional information, please see page 15.

Customer Service. Customer service is a priority of the Bureau of Deferred Compensation and each Investment Provider within the program. Please contact the Bureau of Deferred Compensation toll free at 1-877-299-8002 with any concerns.

Investment Advice. All of the Investment Providers offer free consultation upon enrollment in the Deferred Compensation Plan. Nationwide, VALIC, and Empower Retirement offer advisory services. **These services are available to participants for a fee.** Please contact Nationwide, VALIC, or Empower Retirement for any further questions about these advisory services.

Column Explanations

(Needed for pages 3-9)

Investment Providers are the financial service companies that offer investments in the Deferred Compensation Plan. The Plan features five traditional investment companies and one online brokerage service company. Toll-free telephone numbers and web addresses are provided for easy access.

Products are the individual mutual funds, target date funds, deposit accounts, and other investments offered by the Investment Company.

Morningstar Fund Category identifies what type of stocks or bonds are held within that particular mutual fund. The definitions for these “Morningstar fund categories” can be found on pages 11 and after of this document.

Index is a comparable standard for that particular mutual fund category and is listed below each mutual fund *in italics*.

Ticker Symbol is a system of letters used to identify the mutual fund in various types of media such as newspapers, websites, etc.

Star Rating is the 5-year Morningstar Star rating of a fund’s risk-adjusted return as related to similar funds. Funds are rated from one to five stars, with the top 10% of performers in each Morningstar Category receiving 5 stars and the bottom 10% of performers receiving 1 star. The Morningstar Star Rating is used for identifying funds worthy of further research, but should not be considered buy or sell recommendations. Funds with a Star Rating less than 3 are being reviewed for possible termination from the Deferred Compensation Plan.

Inception Date is the day a fund begins offering shares is known and identifies the beginning of a new mutual fund.

Historical Returns are the 12 month, 3, 5, and 10 year returns detailing the gain or loss from an investment over that time period. The historical return should be equal to or greater than the index or Morningstar Category returns over the same period of time. *However, returns reflect historical performance and should not be considered indicative of future performance.*

Fees include the portfolio manager’s compensation and other expenses associated with operating the mutual fund. The fee is stated as a percentage of the fund’s average daily net asset value and is assessed before any returns are paid to investors. The expense as a dollar amount of the fee *will vary* due to factors such as account balance and rate of return. For example, the dollar amount of the fee for a \$1,000 account with an Investment Management Fee of 0.93% would be \$9.30 (without any type of fluctuation in the fee or trading activity). A portion of the Investment Management Fee may be reimbursed to the Investment Providers for offering a particular fund. A portion of these fees -- \$1.70 per participant per month -- funds the State of Florida Deferred Compensation Plan.

www.myfloridadeferredcomp.com

- * Fund names with respective 'ticker symbol' are the variable investment products offered in the Deferred Compensation Plan.
- * Immediately below the fund name in **bold** is its **Morningstar Category**.
- * After the Morningstar Category, and in *italics* is the *benchmark index* identified by the Fund to measure its performance.
- * Comparing the Fund against its *benchmark index* will give an indication of fund performance.
- * The Star Rating is determined by comparing a fund's risk adjusted returns with all other funds in the same category. A rating is then assigned (5 = best, 1 = worst).
- * Short-term and excessive trading fees may apply. Please see the prospectus of the mutual fund for more information.

Target Date Retirement Funds

Historical Returns as of 3/31/2017

Each Investment Provider offers a menu of Target Date Funds (TDF) used to default investment based on the participant's age and time to retirement. These TDFs qualify under the U.S. Department of Labor regulations as Qualified Default Investment Alternatives (QDIA) by acting as a single investment capable of meeting a participant's long-term retirement savings needs.
Past performance does not guarantee future results.

VALIC offers American Funds products. T. Rowe Price offers T. Rowe Price products. Voya offers Vanguard products. Empower offers American Century products. Nationwide offers TIAA-CREF products.		Above each time series is the category average return of all Target Date Funds of similar date range as reported to Morningstar. Comparison of the return of a TDF to this average return provides an indication of fund performance.								Fees (These are already included in historical returns)

Schwab Personal Choice Retirement Account® (PCRA)

On-line Brokerage Service
 For Broker Assistance: 1-888-393-7272
www.schwab.com

To enroll contact Nationwide Retirement Solutions at 1-800-949-4457

Funds available through the self-directed brokerage window have not been selected through any selection process, are not monitored, require investment expertise to prudently manage and have risk of substantial losses.

Schwab's PCRA currently provides access to more than 6,000 mutual funds from 400 fund families. Of the 6,000 mutual funds available, more than 3,000 are offered without loads and transaction fees as part of the Schwab Mutual Fund OneSource service, and more than 1,100 are institutional or load-waived funds. Of the 6,000 mutual funds available, approximately 1,500 are no-load funds with transaction fees, and 500 are no load, no transaction fee. For a complete listing of available products offered through Charles Schwab & Co. Inc., visit their website at www.schwab.com.

There is a \$25 annual fee associated with this account that is paid to Nationwide.

Schedule of Commissions and Transaction Fees

STOCKS - Stock Commissions per Executed Trade (Includes Exchange Traded Funds)

Trading Channel	Transaction Fee
Electronic	
Stocks and non-Schwab ETFs	\$4.95
Schwab ETFs™	\$0.00
Broker-Assisted	Electronic commission, plus \$25

MUTUAL FUNDS

well as certain other funds, are available with no transaction fees when placed through one of Schwab's electronic or Broker assisted channels.

Transaction-Fee Mutual Funds:

Trading Channel	Purchases	Sell
Electronic	\$50 per trade	\$0
	Electronic commission, plus \$25 service charge per trade	\$25 service charge per trade
Broker-Assisted		

Other information for all Mutual Fund Transactions: Some funds may also charge sales and/or redemption fees. Please read the prospectuses for details.

** Fixed account returns are guaranteed for the current quarter and credited & compounded daily.*

*** First Quarter return has been declared by the respective Investment Provider*

The assets in the guarantee of principal and interest accounts are backed by the financial strength of the insurance companies offering them. Additionally, the Office of Insurance Regulation analyzes the financial condition of the insurance companies on a quarterly basis.

Explanation of Morningstar Fund Categories

Mutual funds do not guarantee a rate of return, nor do they guarantee against loss of money invested. There are two factors that will cause the value of a variable fund to increase: 1) the fund is paid interest and/or dividends, which is considered income, or 2) the fund sells a stock or bond at a higher price than it was purchased for, which is considered capital appreciation. Mutual funds differ based on their investment objectives. Some funds seek as much income as possible, while others attempt to increase their value solely through capital appreciation. Many funds attempt to increase in value through both income and capital appreciation. Funds that look to increase in value through income have relatively stable returns (low volatility), while funds that seek capital appreciation have relatively unstable returns (high volatility). Listed below are definitions of various fund objectives.

Allocation--30% to 50% Equity

Funds in allocation categories seek to provide both income and capital appreciation by investing in multiple asset classes, including stocks, bonds, and cash. These portfolios are dominated by domestic holdings and have equity exposures between 30% and 50%.

Allocation--50% to 70% Equity

Funds in allocation categories seek to provide both income and capital appreciation by investing in multiple asset classes, including stocks, bonds, and cash. These portfolios are dominated by domestic holdings and have equity exposures between 50% and 70%.

Communications

Communications portfolios concentrate on telecommunications and media companies of various kinds. Most buy some combination of cable television, wireless-communications, and communications-equipment firms as well as traditional phone companies. A few favor entertainment firms, mainly broadcasters, film studios, publishers, and online service providers.

Diversified Emerging Mkts

Diversified emerging-markets portfolios tend to divide their assets among 20 or more nations, although they tend to focus on the emerging markets of Asia and Latin America rather than on those of the Middle East, Africa, or Europe. These portfolios invest predominantly in emerging market equities, but some funds also invest in both equities and fixed income investments from emerging markets.

Emerging Markets Bond

Emerging-markets bond portfolios invest more than 65% of their assets in foreign bonds from developing countries. The largest portion of the emerging-markets bond market comes from Latin America, followed by Eastern Europe. Africa, the Middle East, and Asia make up the rest.

Foreign Large Blend

Foreign large-value portfolios invest mainly in big international stocks that are less expensive or growing more slowly than other large-cap stocks. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Foreign Large Growth

Foreign large-growth portfolios focus on high-priced growth stocks, mainly outside of the United States. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Foreign Large Value

Foreign large-value portfolios invest mainly in big international stocks that are less expensive or growing more slowly than other large-cap stocks. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Health

Health portfolios focus on the medical and health-care industries. Most invest in a range of companies, buying everything from pharmaceutical and medical-device makers to HMOs, hospitals, and nursing homes. A few portfolios concentrate on just one industry segment, such as service providers or biotechnology firms.

High Yield Bond

High-yield bond portfolios concentrate on lower-quality bonds, which are riskier than those of higher-quality companies. These portfolios generally offer higher yields than other types of portfolios, but they are also more vulnerable to economic and credit risk. These portfolios primarily invest in U.S. high-income debt securities where at least 65% or more of bond assets are not rated or are rated by a major agency such as Standard & Poor's or Moody's at the level of BB (considered speculative for taxable bonds) and below.

Inflation-Protected Bond

Inflation-protected bond portfolios invest primarily in debt securities that adjust their principal values in line with the rate of inflation. These bonds can be issued by any organization, but the U.S. Treasury is currently the largest issuer for these types of securities.

Intermediate Government

Intermediate-government portfolios have at least 90% of their bond holdings in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. These portfolios have durations typically between 3.5 and 6.0 years. Consequently, the group's performance --and its level of volatility--tends to fall between that of the short government and long government bond categories.

Intermediate-Term Bond

Intermediate-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and typically have durations of 3.5 to 6.0 years. These portfolios are less sensitive to interest rates, and therefore less volatile, than portfolios that have longer durations. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Intermediate-term is defined as 75% to 125% of the three-year average effective duration of the MCBI.

Large Blend

Large-blend portfolios are fairly representative of the overall US stock market in size, growth rates and price. Stocks in the top 70% of the capitalization of the US equity market are defined as large cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate. These portfolios tend to invest across the spectrum of US industries, and owing to their broad exposure, the portfolios' returns are often similar to those of the S&P 500 Index.

Large Growth

Large-growth portfolios invest primarily in big U.S. companies that are projected to grow faster than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). Most of these portfolios focus on companies in rapidly expanding industries.

Large Value

Large-value portfolios invest primarily in big U.S. companies that are less expensive or growing more slowly than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Long-Term Bond

Long-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and typically have durations of more than 6.0 years. Because of their long durations, these portfolios are exposed to greater interest-rate risk. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Long-term is defined as 125% of the three-year average effective duration of the MCBI.

Mid-Cap Blend

The typical mid-cap blend portfolio invests in U.S. stocks of various sizes and styles, giving it a middle-of-the-road profile. Most shy away from high-priced growth stocks but aren't so price conscious that they land in value territory. The U.S. mid-cap range for market capitalization typically falls between \$1 billion and \$8 billion and represents 20% of the total capitalization of the U.S. equity market. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.

Mid-Cap Growth

Some mid-cap growth portfolios invest in stocks of all sizes, thus leading to a mid-cap profile, but others focus on midsize companies. Mid-cap growth portfolios target U.S. firms that are projected to grow faster than other mid-cap stocks, therefore commanding relatively higher prices. The U.S. mid-cap range for market capitalization typically falls between \$1 billion and \$8 billion and represents 20% of the total capitalization of the U.S. equity market. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Mid-Cap Value

Some mid-cap value portfolios focus on medium-size companies while others land here because they own a mix of small-, mid-, and large-cap stocks. All look for U.S. stocks that are less expensive or growing more slowly than the market. The U.S. mid-cap range for market capitalization typically falls between \$1 billion and \$8 billion and represents 20% of the total capitalization of the U.S. equity market. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Multisector Bond

Multisector-bond portfolios seek income by diversifying their assets among several fixed-income sectors, usually U.S. government obligations, U.S. corporate bonds, foreign bonds, and high-yield U.S. debt securities. These portfolios typically hold 35% to 65% of bond assets in securities that are not rated or are rated by a major agency such as Standard & Poor's or Moody's at the level of BB (considered speculative for taxable bonds) and below.

Real Estate

Real estate portfolios invest primarily in real estate investment trusts of various types. REITs are companies that develop and manage real estate properties. There are several different types of REITs, including apartment, factory-outlet, health-care, hotel, industrial, mortgage, office, and shopping center REITs. Some portfolios in this category also invest in real estate operating companies.

Short-Term Bond

Short-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and typically have durations of 1.0 to 3.5 years. These portfolios are attractive to fairly conservative investors, because they are less sensitive to interest rates than portfolios with longer durations. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Short-term is defined as 25% to 75% of the three-year average effective duration of the MCBI.

Small Blend

Small-blend portfolios favor U.S. firms at the smaller end of the market-capitalization range. Some aim to own an array of value and growth stocks while others employ a discipline that leads to holdings with valuations and growth rates close to the small-cap averages. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.

Small Growth

Small-growth portfolios focus on faster-growing companies whose shares are at the lower end of the market-capitalization range. These portfolios tend to favor companies in up-and-coming industries or young firms in their early growth stages. Because these businesses are fastgrowing and often richly valued, their stocks tend to be volatile. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Small Value

Small-value portfolios invest in small U.S. companies with valuations and growth rates below other small-cap peers. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Technology

Technology portfolios buy high-tech businesses in the U.S. or outside of the U.S. Most concentrate on computer, semiconductor, software, networking, and Internet stocks. A few also buy medical-device and biotechnology stocks, and some concentrate on a single technology industry.

World Allocation

World-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. While these portfolios do explore the whole world, most of them focus on the U.S., Canada, Japan, and the larger markets in Europe. It is rare for such portfolios to invest more than 10% of their assets in emerging markets. These portfolios typically have at least 10% of assets in bonds, less than 70% of assets in stocks, and at least 40% of assets in non-U.S. stocks or bonds.

World Bond

World-bond portfolios invest 40% or more of their assets in foreign bonds. Some world-bond portfolios follow a conservative approach, favoring high-quality bonds from developed markets. Others are more adventurous and own some lower-quality bonds from developed or emerging markets. Some portfolios invest exclusively outside the U.S., while others regularly invest in both U.S. and non-U.S. bonds.

World Stock

World-stock portfolios have few geographical limitations. It is common for these portfolios to invest the majority of their assets in the U.S., Europe, and Japan, with the remainder divided among the globe's smaller markets. These portfolios typically have 20%-60% of assets in U.S. stocks.

Guarantee of Principal and Interest Products

A guarantee of principal and interest product guarantees a rate of return for a specified period of time, usually one quarter (three months). Fees are associated with these products and are included in the returns listed on pages 3-6. Every Investment Provider offers a guarantee of principal and interest account. When the term "guaranteed" is used to describe any product in the Plan, it refers to a guarantee made by one of the Investment Providers in the Plan, not the Deferred Compensation Plan or the State of Florida.

Historical Returns

The returns reflect historical performance and should not be considered indicative of future performance. Returns include changes in principal value, reinvested dividends, and capital gain distributions. Investment return and principal value will vary and shares may be worth more or less at redemption than at original price. Read the fund's prospectus carefully for more information on management fees, risk, and other expenses before you enroll in a fund.

Fee Policy

The fee of the mutual fund offered through the Investment Provider (expense for managing the fund). This fee (expense ratio) is subject to change at any time, within certain limits. The Investment Provider is responsible for reporting the most recent expense ratios to the Bureau of Deferred Compensation. There are no additional fees for investments within the Deferred Compensation Plan.

A "Redemption Fee" is a fee charged for selling a mutual fund too quickly after buying. A redemption fee is used to discourage the buying and selling of mutual funds frequently. It is only charged to the investor when a fund is sold within the window of time designated by the mutual fund company. Not all funds will have this fee, but it is important to review each fund's prospectus or call the Investment Provider for more information about fund redemption fees.
